

Bài 1: Viết khai class Circle theo diagram

```
1. public class Circle
```

```
{
```

```
    private double radius;
```

```
    private String colour;
```

```
    public Circle ()
```

```
    {
```

```
        this.radius = 1.0;
```

```
        this.colour = "red";
```

```
    }
```

```
    public Circle (double radius)
```

```
    {
```

```
        this.radius = radius;
```

```
        this.colour = "red";
```

```
    }
```

```
    public Circle (double radius, String colour)
```

```
    {
```

```
        this.radius = radius;
```

```
        this.colour = colour;
```

```
    }
```

```
    public double getRadius ()
```

~~Circle~~

```
{ return radius; }
```

```
public String getColour()
```

```
{ return colour; }
```

```
5: public void setRadius (double radius)
```

```
{ this.radius = radius; }
```

```
public void setRadius (double radius)
```

```
{ this.colour = colour; }
```

```
public double getArea () { return Math.PI * }
```

```
10: public double getArea () { return
```

```
public String toString ()
```

```
{
```

```
return "banking : " + radius + " , " + area + "Hobur
```

```
}
```

```
15: public static void main (String [] args)
```

```
{ Circle c1 = new Circle();
```

```
Circle c2 = new Circle ();
```

```
Circle c3 = new Circle (,,);
```

```
20: System.out
```

Q.2

```
import java.util.Scanner;

public class Rectangle {
    private int length;
    private int width;

    public Rectangle () {
        this.length = 0;
        this.width = 0;
    }

    public Rectangle (int length, int width) {
        this.length = length;
        this.width = width;
    }

    public int getLength () {
        return length;
    }

    public void setLength (int length) {
        this.length = length;
    }

    public int getWidth () {
        return width;
    }
}
```

```
public void setWidth (int width) {  
    this.width = width;  
}
```

```
public int getArea () {  
    return length * width;  
}
```

@ Override

```
public String toString () {  
    return "Rectangle [ length = " + length + "  
    width = " + width + " ]";  
}
```

```
public class Main {  
    public static void main (String[] args) {  
        Rectangle rect1 = new Rectangle (10, 5);  
        System.out.println (rect1.toString());  
        System.out.println ("Area: " + rect1.getArea());  
  
        rect1.setLength (20);  
        System.out.println (rect1.toString());  
        System.out.println ("New Length: " + rect1.getLength());  
    }  
}
```

Q. 9

```
import java.util.Scanner;

public class Employee {
    private int id;
    private String first Name;
    private String last Name;
    private int salary;

    public Employee (int id, String first Name,
        String last Name, int salary) {
        this.id = id;
        this.first Name = first Name;
        this.last Name = last Name;
        this.salary = salary;
    }

    public int get ID () {
        return id;
    }

    public String get first Name () {
        return first Name;
    }

    public int get salary () {
        return salary;
    }
}
```

```
public String getFullName() {  
    return lastName + " " + firstName;  
}
```

```
public int getAnnualSalary() {  
    return salary * 12;  
}
```

```
public int upToSalary(int percent) {  
    this.salary = salary + (salary * percent) / 100;  
    return this.salary;  
}
```

@Override

```
public String toString() {  
    return "Employee [id=" + id + ", name=" +  
        getFullName() + ", salary=" + salary + " ]";  
}
```

```
public class TestEmployee {  
    public static void main (String[] args) {  
        Employee e1 = new Employee (101, "An",  
            "Nguyen Van", 1000);  
        System.out.println (e1.toString());  
    }  
}
```

```

system.out.println("Ho to dekho" + e1.getFullName()
system.out.println("Quay bang nam" + e1.getAnnualSalary()
system.out.println("Dung thu tiep" + e1.getPhoto()
system.out.println("Thay tin noi" + e1.toString());

```

ĐỀ 4

import java.util.Scanner;

public class Account {

private String id;

private String name;

private int balance;

public Account(String id, String name, int balance)

{ this.id = id;

this.name = name;

this.balance = balance;

}

public String getId() {

return id;

}

public String getName() {

return true;
