

BT tuần 8

Bài 1:

```
main.java abstract class HinhHoc {  
    public final float PI = 3.14f;  
    String ten;  
    float chuvi; float dientich; float thetick;  
    public HinhHoc() {}  
    void xuatTen() {  
        System.out.println("Tên hình: " + ten);  
    }  
    abstract void tinhChuvi();  
    abstract void tinhDientich();  
    void tinhThetick() {}  
}
```

```
class HinhTron extends HinhHoc {
```

```
@Override
```

```
float bankinh;
```

```
public HinhTron() {
```

```
    ten = "Hình Tròn";  
}
```

```
voidNhap bankinh() {
```

```
    Scanner sc = new Scanner(System.in);  
    System.out.println("Nhập bán kính: ");
```

```
bankLenh = sc.nextFloat();
```

```
}
```

```
void tinhChuVi () {
```

```
ChuVi = 2 * PI * bankLenh;
```

```

Bar 2: public abstract class Person {

private String name;

private String address;

public Person (String name, String address) {

this.name = name;

this.address = address;

}

```
public void set name (String name) {
```

```
    this.name = name; }
```

```
public void set name (String name) {
```

```
    this.name = name; }
```

```
public String get name () {
```

```
    return name;
```

```
}
```

```
public void set address (String address) {
```

```
    this.address = address; }
```

```
public String get Address () {
```

```
    return address;
```

```
}
```

```
public abstract void display();
```

```
}
```

```
public class employee extends person {
```

```
    private int salary;
```

```
    public employee (String name, String address, int salary)
```

```
    {
```

```
        super (name, address);
```

```
        this.salary = salary; }
```

① Override

```

public void display() {
    System.out.println("Employee name: " + get name());
    ( _____ address = get address());
    ( _____ salary = salary);
}

```

```

public class customer extends person {

```

```

    private int balance;

```

```

    public customer (String name, String address, int balance) {
        super (name, address);
        this.balance = balance;
    }

```

@ Override

```

public void display() {

```

```

    System.out.println("Customer name: " + get name());
    ( _____ address = address());
    ( _____ balance = balance);
}

```

?

Bài 3: abstract class PhuongTienChuyen

```

protected String loiPhongten;

```

```
